Macro Browser: Browsing a list of keystrokes in keymacro is made easier thanks to a revamped interface. The new user interface makes it easy to get to any keystroke listed, to add new ones, to rearrange the keystrokes in a column, or to remove any you don't want. Search: You can search your keystrokes by entering a keyword in the Search box at the top right of keymacro, and the results appear in a new window, organized by column. You can browse through your results and find the one you want to use quickly. Rearrange: Keymacro is optimized to work with a keyboard, so there are keystrokes that automatically appear in the right place in the keyboard. You can move any keystroke to the place where you want it by dragging it to the desired location. Copy & Paste: You can copy and paste text from anywhere, including a browser's address bar, without having to copy it from the location in which it appears. Export and Import: You can export keystrokes to a file of your choice, and then open the file in Photoshop, Illustrator, or Lightroom. Keymacro includes over 300 standard keystrokes, plus hundreds of custom ones you can create in keymacro. All macros are customizable, so you can use them for any task you want. When you start a new macro, you create a keyboard shortcut, a shortcut that causes the program to execute the specified keystrokes at the same time. For example, if you want to create a new macro to cut a marquee out of an image, you can enter the keystrokes needed into the program and assign a keyboard shortcut. Then you can trigger the shortcut whenever you want, even when you're not using keymacro. Keymacro can be used to make and use macros in all 1d6a3396d6
