Subtract anything from the frame and the resulting layer disappears. Power users will love the ability to "delete" objects from the slate of a photo, managing the layer, even saving only the contents, and optionally using them later. The Highlight Roll contains all the highlights you made in your previous session, making it easy to find and restore. A new "Add to Favorites" option will save and navigate around the "Highlight roll" by name. You can highlight several files at once by creating a "Favorites" group for them. The "Layer palette" provides an eye-outlining layer effect to help users make it easier to see the mid-tones of images, plus a non-destructive healing brush tool, in conjunction with a new Curves adjustment. There are also tools to create art brushes, vector layers, and create a "Group Mask". The Viewer workspace is basically the editing area of the app. It provides a set of panels that display state information. The "Docks" and "View" panels provide quick access to originals, adjustment controls, and quick preview modes. **ABOVE:** Fuzzy edges are distorted on the wave of the water, the pixels permanently altering the movement of the water. At lower frequencies, and with a tighter blur, the effect is more evident. With this advantage of low resolution and small details in the first panel, the image introduces noise. However, with the additional frequency response in the second panel, the filmic effect is "fuzzy" at a scale of 2 to 5 pixels, which is acceptable for this type of image.

The Basic Tool Panel lets you navigate and edit simple features of your individual files. You can also conform to folders or your desktop using the "Customize Tool Panel" which makes it easy to locate files you need to edit. Retouching your image using the Retouch tool uses a Mode drop-down menu that lets you quickly

undo, redo, or toggle between brush, eraser, and airbrush modes. Using this feature, you can export your image to your local computer, file server, hard drive, network, or FTP provider. The built-in File Info dialog gives you access to various file detail and file-related capabilities like image dimensions when you save the image to your local drive. If you mark files for transfer with a checkbox, you can also automatically trigger a transfer to the selected destination with a single click. Plus, you can access previews of your files in real time to see the effects of your retouching before committing photos to your hard drive. **What It Does:** The Lasso tool allows you to create a selection by using a freehand area of highlighted pixels. The Create an Lasso button allows you to use the Lasso tool to draw an unbroken line free of any gaps. Use the Shape Select tool to quickly select objects by their shapes, allowing you to easily edit them in the Photoshop interface. **What It Does:** This tool can be used to remove elements, such as people and pets, from an image. Use the Eraser tool to soften and smooth selected areas. The Airbrush tool is useful for keeping textures and skin looking smooth or adding dramatic effects like a drop of water or texture. The Quick Selection tool allows you to select which parts of an image need to be altered.

With the new Tags feature of Photoshop, you can annotate and organise your photos easily with unlimited storage, great tagging, and a smart and intuitive workspace. You can now organise images by name, date and type, or find images based on geo-location, date, size, and other key criteria. Even better, Photoshop will name all new photos added to the folder automatically. With the new Local Updates workspace, you can take advantage of the new GPU support for finding the most accurate colours across different types of light. And especially when importing video. It's great for adjusting colours of clips to take into the studio. This workspace is also great for quickly and easily fine-tuning your images. Another one of our favourite new features is called HDR Merge. It takes advantage of the more stable native APIs and leverages the hardware features of your camera and the improved image processing to deliver amazing "image-like images". This new UI is now the default in Photoshop. Another one of the big features we're looking forward to is the improved Noise Reduction feature for images and video. Now it supports 8K footage, and uses all of your GPU video card's processing power to improve the output. It can also process faster (as much as two times faster), and reduce noise by far more than other products. So the next time you think you've got a perfect shot, when you come back to view it, you'll see a better image. The third favorite new feature for us in Photoshop is the redesigned Liquify Tool for manipulating layers. This new tool makes it possible to quickly and easily change the shape of objects moving them around curves and along splines. While this is a major set of changes to our workflow, it makes it so much more fun!

Adobe Photoshop also doubles down on its commitment to the Creative Cloud for even more of the industry-leading tools you need and access to the most innovative features wherever you are. Whether your work is in iPhoto, Photoshop, or on the web, images will be edited and composed collaboratively. You'll be able to also share files directly from your camera, shoots, and the web, and access your Adobe Stock and Creative Cloud libraries of stock imagery and intellectual property files in Photoshop's web-native experience. The most exciting new capability announced at MAX was Share for Review. With the ability to collaborate in one view, Share for Review enables teams to work together on projects on their own professional network, enabling greater interaction and richer conversations, all without ever having to leave Photoshop. At MAX 2018, Adobe introduced two additional collaboration tools, Share for Review, and the mobile version of Adobe Sensei (formerly Project XD), and announced full cloud access to the world's largest collection of photography stock imagery via new mobile apps for the service. With Share for Review, there is now no need to send work to a meeting room and no need to copy and paste files from your laptop to the projector, slide viewer or white board. With Share for Review, you can take pictures of images and have them appear instantly on your team's screen for everyone to view. Each of the participants can comment on edits in real time, and even make changes collaboratively in the same place. They can invite others to Join In and work on the project

together.
